

LEITZ RECYCLE REFLECTS YOUR CHOICE FOR THE ENVIRONMENT

With the new Recycle range from Leitz you can improve both the global environment – and your own. Every product in the range is climate neutral, 100% recyclable and made from a high percentage of recycled materials.

Recycled Content

All Leitz Recycle products contain a high percentage of recycled materials, up to 100%. For example, the Leitz Recycle Letter Tray, Magazine File and Waste Paper Bin are made from 98% post-consumer recycled plastic whilst the 3-Flap Card Folder and Divider Book are made from 100% recycled card.

CO2 neutral

All Leitz Recycle products are certified CO2 neutral in cooperation with Climate Partner. All emissions caused by the production of the product are reduced as far as possible, the low remaining emissions are compensated in specific carbon reducing projects.

100% Recyclable

All Leitz Recycle products are 100% recyclable. Products have been designed for disassembly – which means that the different material types, such as card, plastic or metal, can be easily separated and recycled where facilities are available. Products can be disassembled by hand using at most a pair of scissors or a screwdriver. The Lever Arch File includes an ingenious tool to aid the separation of the different material types.

Eco-friendly Packaging

Of course you would expect such an environmentally friendly range of products to also have environmentally friendly packaging and the Leitz Recycle range does not disappoint! Firstly, they have used as little packaging as possible but where packaging is needed we use either 100% recycled paper and board or 70% recycled plastic. Plastic packaging is light and efficient (only small amounts of material are needed) and this high level of recycled content means resources are saved. In addition, all Leitz Recycle packaging can be easily recycled as no complex material mixes are used.
