

Cartridge Page Yields

ValueX cartridges print the same amount of pages (or more) as the original equipment manufacturer (OEM) cartridge.

ValueX cartridges are tested to ISO standards 19725 and 24712 to meet or exceed the page yield of OEM cartridges. This is done through rigorous testing that also measures print performance in various environmental conditions.

There are many variables that can impact page yield, such as print coverage, paper size, the age of the printer, room temperature, the humidity, eco-mode printing and more.

All of these variables can impact the amount of pages your cartridges print. Plus, all ValueX cartridges accurately report the number of pages remaining in the cartridges, so you always know where you stand.
