

Carbon neutral printers & MFPs from a carbon neutral business

Whether you're looking for new devices or a refresh of your printer fleet, every product in the Kyocera range - from the smallest desktop laser to the biggest cut-sheet inkjet production printer - can now be carbon offset to help you reduce your environmental impact.

Choosing Kyocera as your carbon neutral print partner will enable you to demonstrate your commitment to sustainability through a certificate of authenticity.

Are you ready to print everything in green?

What is Carbon Neutral Printers & MFPs?

We offset your devices, plus the consumables they use over the lifetime* of the product, through a simple bolt-on to the device purchase. This covers all elements of production, packaging, transportation, consumables.

Our eco-conscious toner and device recycling programmes close the loop.

What is a certificate of authentication?

We provide an auditable and traceable certificate via myclimate for all our registering carbon neutral customers.

The certificate enables you to demonstrate your green credentials and carbon neutrality to your stakeholders.

How are we offsetting the carbon?

We partner with myclimate who invest in Gold Standard climate protection initiatives on your behalf.

We've hand-picked three projects that are certified for their sustainable development factors and reflect our company ethos:

"to do what is right as a human being."

It's time to print everything in green.
